

This report covers 18 important genes known to impact hormone production, balance and detoxification as well as other vital factors that affect male health including blood clotting, bone density, mood & heart health

- **Androgen levels**

- 5aR
- HSD3
- SHBG

- **Androgen receptors**

- AR

- **Blood clotting**

- Factor V Leiden

- **Cardiovascular health**

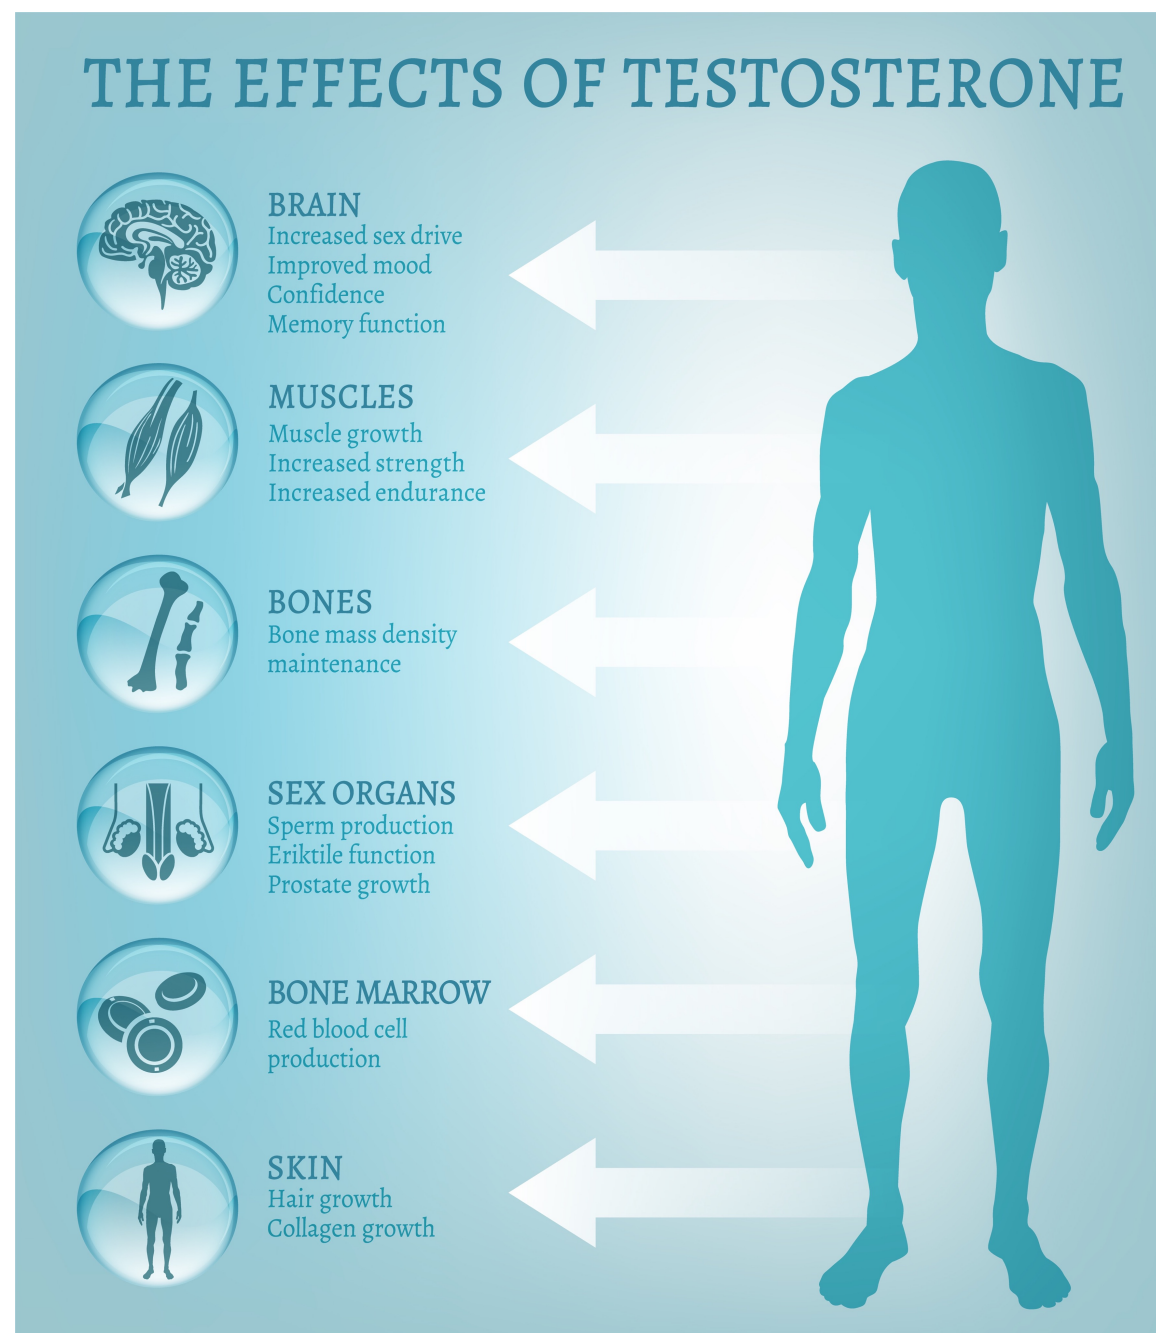

- APOE
- Factor V Leiden
- NOS3

- **Cholesterol**

- APOE

- **Detoxification**

- UGT2B15

- **Erectile function**

- NOS3

- **Healthy Ageing**

- GSTM1
- GSTP1
- SOD2

- **Methylation**

- MTHFR

- **Oestrogen & receptors**

- ESR1

- **Sperm production**

- FSHB

- **Vitamin D requirement**

- VDR
